Then, select "Application want to uninstall and wait for the application information screen to be opened, then click on "UninstallA ¢ â, as shown in the screenshot. Use only Google Play Store, since everything It is aware, the playback shop is especially designed for Android software and only contains reliable and secure applications. It is often known as the "Android Market" because it is loaded with different types of applications to rigidly all its Needs so that you do not have to rely on other sources of third parties to buy / install applications. Mount your SD card Another Remedy application for the Android Application Not installed is to make sure that the SD card inserted on your device is not inaccessible. To verify the same: first, disconnect your device from your PC and then visit "Samples" on your Android and select "Storage" of the options that appear. Finally, click "MO The SD card "on the storage information screen. Now you can restart your device and try to install the application now, it should work! Choose the location of the application with prudence, it is recommended that it does not manipulate the location of the application and let the software decide where it should be placed. As far as possible, allow the applications to be in the internal memory of your device or externally. Now, to clean your SD card, Visit "Show" and select "Storage" and tap "SDFORMAT SD Card" and mount once more to use it without problems. Application permissions You can reset the application permissions to combat the Android application, it did not install Error by visiting ⠬ ASettingsâ â ¬ and then selecting â ¬ Aptsâ â ¬. Now go to the Applications menu and press "Application PreferencesReset" or "RESET "RESET Permits... This will allow third-party application file only from a reliable and secure source to avoid any errors during installation. Restart Your Device Finally, if nothing else works, restart your device to complete all the operations that might be causing the error. To restart, simply press the power button until you see a pop-up. Select "REMOVE" and wait for your device to restart, simply press the power button until you see a pop-up. Select "REMOVE" and wait for your device to restart, simply press the power button until you see a pop-up. Google Play is an authenticated source for downloading apps, but sometimes you see an error apart from an error, saying that the app is not installed application through some research and by finding ways to fix it. It is a common mistake that most people face day to day and here they will learn how to solve this problem easily. If you cannot install the app on your Android phone, there may be several reasons. Even if you download from an authentic source, there may be other reasons behind it, which will make your Android unable to download apps. You may not know what is the main reason behind the application not installed by mistake, but here we have listed some of the reasons behind the Android application, it does not install problem. Lack of SD card space may be a problem for you. You will receive this notification. The inappropriate location of the application may also be the problem. If you cannot select the correct location for the application that download, your Android may not be able to install an application. If the location where you downloading a file from an unknown unknown unknown Which is somewhere other than Google Play, you may get this error due to the source and security issues. If the file you are trying to download is corrupt, then the Android system will not download the file and will provide you with an error message. All the errors you need to do is to backup your device. So the application not installed the fixes will not result in data loss. Here are some steps on how to backup my information. Now the backup my information. Now the backup will start. Before making the fixation, make sure that the backup is complete. Note that the backup steps of your Android vary from different devices and versions of Android operating system. You have already known some of the reasons behind the application was not installed by mistake, but you also need the solutions to solve it. You must take some steps to get rid of the problem now. Below, we have listed the 13 best ways for you. Part 1. The best way to fix the "application not installed", the problem related to the software most of the time, such kind of errors occurs due to some unknown errors, so it is better to rely on a professional tool to save time. Then, the IMYFONE FIXPPO for Android is highly recommended. All problems related to the Android system can be solved by this program with simple clicks, so you do not need to know the technology about Android. You will be offered the highest repair speed and speed. Just a few minutes to have a check now! Download Now for Windows 10/8/7 Step 1: After installing and running it on your computer, you need to provide your device details to start finding the firmware that matches your device is in download and extract the firmware successfully. Next, make sure that your device is in download mode and the related steps are on the screen. Step 3: When everything is ready, all you need to do is wait for the fixation process to be completed. Most professional tech websites also recommend this tool, so why not download the free trial to try it Download NowFor Windows 10/8/7 Part 2. 12 Basic and Common Ways to Fix The Problem "App not install" The following 12 methods are the basic ones, so in general terms, the repair rate is relatively low. However, if there are only minor issues on your device, you can try these common ways first to see if they can help you download the application. Here are the steps to restart your Android. Step 1: Press and hold the power button for a few seconds. Step 2: There will be options for shutdown, restart and emergency mode. Step 3: This will reboot your system immediately and your uninstalled application fixing is done. 2. Downloading apps from Google Play Google Play should be your first option to download apps. Step 1: Open the menu and click on the Google Play app. Step 2: Find the application you want to download and click download soon. 3. Check the location of the application Some cannot be downloaded to SD card and some need an SD card. So to avoid this error, you need to check the location of the file. That's how you'll check it out. Step 1: Open the configuration and internal storage. From here you can easily see the location of the application and move it to the other storage. Yerify the application file There is a great chance that your application file might contain a virus if it does not come from the proper source. So you need to check the application file to prevent virus from external sources, your device will not accept the files. The reason is about the damaged files, so you should avoid doing it on the SD card. But what you can do is download the APK editor. It will allow you to install the application on internal storage and make sure that your device is accepting files from external sources. 6. Sign the application without signing To sign the application without signing, you will need to download the Zipsigner application from Google Play. This will help you launch the signed application. Step 3: Select input/output and sign the application. Step 3: Select input/output and sign the file with APK. 7. Reset Application Preferences Sometimes you will see the error of the uninstalled application due to the application references you have set. These are the steps to correct the application installation error. Step 1: Go to configuration and open the application installation error. Step 3: Click the Reset Preferences. 8. Delete useless applications You may have a clutter of useless files on your device. The application. Step 1: Select the application. Step 2: Discover apps you don't need anymore. Step 3: Select the application. Step 4: There will be a delete option, so choose to delete this application. 9. Clear Data & Package Installer Cache This problem will occur due to the data and cache that has been stacked. What you need to the data of your application and your device. 10. Mount your SD card The problem of uninstalled application will come if your SD card is not in place. To check if your SD card is in place, follow the storage information and you will see the option of Mount SD card and click on it. 11. Format your SD card before you start downloading the application and files on your SD card, you must make sure that there are no viruses and it is clean of other files. For that, you need to format the SD card and click on the Format SD card. 12. Change the application codes that should verify the application file. The code may not support your device or the previous version may not be capable. Step 1: Download the APK editor from the Google Play store. Step 2: Choose a file and change the code or location as needed for your device. Then install the application. Conclusion Then, the conclusion is that there are multiple reasons why you may get uninstalled application error, what you need to do is choose the proper way like FixPPO for Android to fix this error. You can try all the above solutions that have been given previously. Download now for Windows 10/8/7 10/8/7
